Weather conditions conducive to practicing some forms of recreation in Roztocze

The tourist and recreational features of any area involve, among others, the resources of animate and inanimate nature. For the latter, an important role is played by weather conditions, their seasonal variability and suitability for tourism and recreation. The aim of this study is to characterize the conditions favorable and unfavorable for practicing various forms of tourism, in the seasonal aspect, in the Polish Roztocze. The work has been based on previous studies. An analysis has been performed of the annual course of selected meteorological elements which have a significant impact on opportunities for tourism and recreation, such as rain, sunshine, air temperature, precipitation.
