Accessibility of the vistula region - current status, prospects and threats

The article includes an analysis of communication accessibility at the international level, further and closer levels for the region of of Małopolska Vistula River Gorge counties in the areas of the Vistula voivodships of Lublin, Mazovia and Świętokrzyskie. It has been found unsatisfactory state of accessibility for all modes of passenger transport. With the undeniable dominance of road transport highlighted the need for upgrading the road network and construction of bridge and ring road No. 747th. Increasing the attractiveness of the region through the expansion of tourism and tourist couple should proceed in parallel with the improvement of transport accessibility. In summary, the work included proposals to prospective relief and improvement of the accessibility of the region in the light of new tourism products relating to passenger transport.
