Roztocze with a map and compass – marches on orientation in terms of sightseeing

This paper describes a proposal for a new form of tourism, combining many different elements and skills in the topography, field science, sightseeing, inventory work and geography. Also, the possibility of applying modern information technology in contemporary sightseeing was emphasized.

The aim of the undertaken activities is the development of several proposals for new tourism products in the form of unmarked, attractive routes, whose coverage requires orientation in the field and the practical application of information from the field of natural sciences and humanities, which are significant in tourism and sightseeing.

This is the way to an attractive and active recreation combined with education reassuring a sense of emotional union with nature and culture of the covered region. It is finally a way to return to the old, but much needed today, patriotism patterns.

The study presents basic concepts and ideas for this complex form of tourism, aimed at a noble competition, as well. Also, an example is presented of a tourist product resulting from the practically realized methodology, in the form of a new tourist route in the Krasnobród area, together with the required documentation.
